

Connect your CRM system to Meta Business Suite

You may be able to speak with a Meta Technical Pro for step-by-step guidance to connect your CRM system to Meta Business Suite. Learn how to [schedule a call with a Meta Pro](#).

If you use a customer relationship management (CRM) system to stay up-to-date on your customers and prospects, you can integrate your CRM system with Meta Business Suite to retrieve your leads from your lead ad campaigns. Connecting to a CRM system is recommended because it allows you to access all new leads in one place and removes the need to download a new CSV file each time you want to see your new leads.

You can connect a CRM system to your account through Meta Business Suite. Once your CRM system is integrated, your leads will be automatically sent to the CRM system when a form is completed, unless you have customized your access permissions in Leads access manager. If you have customized your access permissions, you'll need to assign permissions to the CRM system before leads will appear there.

Note: Admins of the Facebook Page with leads access permissions can connect a CRM system.

Connect your CRM system to Meta Business Suite

1. Go to your Facebook Page.
2. Go to **More tools** and click **Meta Business Suite**.

6. Enter the name of the CRM system you want to use into the search bar and select it when it appears.
7. Click **Connect from website** and follow the directions on the CRM system's website to complete the integration. After you've completed the steps and are connected to the CRM system, you'll be able to retrieve new leads directly from the CRM system itself.
8. If the CRM system you've selected says **through Zapier**, click **Connect** and follow the instructions to complete the integration.
9. After you complete the integration, visit the CRM provider's website to view and manage your leads. You can also download leads data through Facebook, if needed.

Remember that if you integrate your CRM system through an external website, you won't be able to edit or disconnect the CRM system from Meta Business Suite. You can test the CRM integration after you've connected it through Meta Business Suite. If you need to edit the integration or remove the CRM integration completely, we recommend visiting the website of your CRM provider for further instructions.
